WAKO Member Benefits

- ✓ Proven Digital Infrastructure for Sport
- ✓ One source of truth for members & events showing WAKO size and activity
- ✓ Global Operations + Knowledge Transfer
- ✓ Scalable & Modular System used at Clubs to Olympics
- ✓ WAKO scoring rules scoring systems

Integrated Technology for Federations

It ensures that every athlete's journey—from their initial national registration to the final point scored on a world championship mat—is captured in one unified, real-time ecosystem.

Service Pillar 1: Member Management

Membership & License Management: Centralised member profiles, License types, Status Tracking (active, expired, suspended)

Federation-Club Structure: Hierarchical access (federation, regions, clubs), Each level sees and manages only what it should.

Online Payment: Members update their own data, download licences and certificates. Fewer emails and admin work

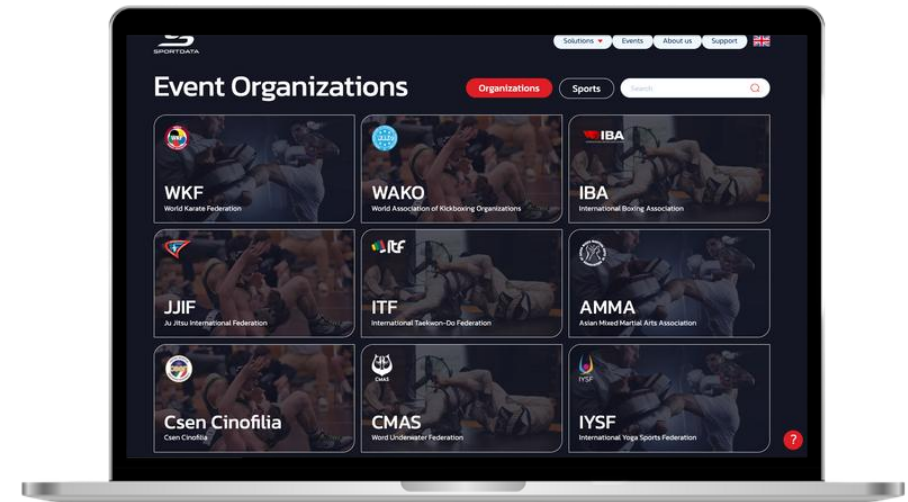

Service Pillar 2:

Events & Entry Management

Event Manager Control Center: Central hub with the tools to create and customize events, sport-specific categories and registration rules tailored to each ISF event.

Direct Member Registration & Payments: A secure, integrated portal where participants can register directly, pay fees via multiple gateways.

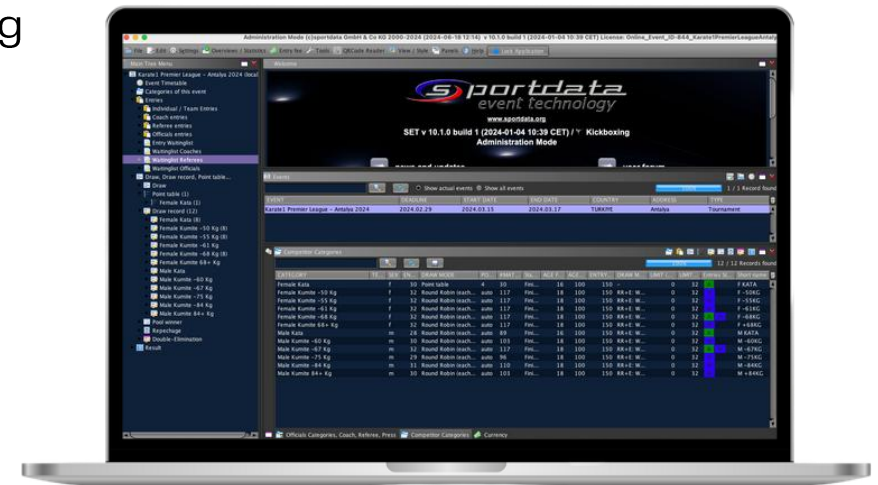

Data Handover: Our system automatically generates validated data exports, ensuring a perfect "handshake" between the registration phase and the live results management system.

Professional On-Venue Data Processing: managing the real-time processing of every point, penalty, and match result directly at the venue.

Dynamic Tournament Architecture: Our service builds the tournament structure — generating brackets, pools, and schedules based on the final verified athlete lists.

Live Web Results & Transparency: Instant synchronization of on-site data to a public-facing web portal, allowing global fans, parents, and coaches to follow live brackets and leaderboards in real-time.

Service Pillar 4: Timing & Scoring

Official Field-of-Play Control: We provide specialized digital point panels for referees and officials, ensuring that data is captured at the source with 100% accuracy and zero manual delay.

Dynamic Multi-Screen Synchronization: A single tap on the official's tablet instantly updates the public LED scoreboard, the web results portal, and the TV broadcast graphics simultaneously, ensuring total transparency for athletes and fans.
